	Note: Wildcards (*) are Yard ID and Track ID	e only available	for Prod. Nam	le,	/	

To see all open visit records, click the 'Open Visits' button.

After you apply any criteria in the Get Data Box click on the 'OK' button.

Note: clicking the 'OK' button with just the Plant ID filled in will return with ALL visit records in the database.

The 'New' button will open a window for manually entering a visit record.

1/11/2022

Current Plant, Yard, Track and Spot (position) location of the railcar.

**Detail View** 

## **Create New Plant Visit**

If you do not use the iNET equipment you can add visit records manually. Click the "new" icon to pop-up the Add Plant Visit screen.

#### **Create New Plant Visit**

When creating a new visit record, the required fields are car initials, car number, yard, track, and spot (position). The plant status will default to 'l' for in-plant.

## Car Hot List - View

After clicking the flame icon, the Maintain Car Hot List window will open. To remove the car from the hot list, click the Ack Flag and enter a response. Your user id and the current date/time will be added to the record. The hot list flag will then disappear when the visit screen is refreshed.

#### **Repair Request - Add**

The car id and request date/time will default to the current. You will only need to enter the repair request description and any comments that you want assigned to this request. Also if you want to change the car status until the repair is complete you can do so here as well. Click the 'add' button when finished.

 $\overline{7}$ 

## Inspections – View

Select the car that you want to view the inspection info and click the 'check' icon

## Inspections – View

After clicking the 'check' icon, the View Car Inspections window will open. This will contain a list of every inspection sheet that has been assigned to the car. To view the line items, highlight the specific inspection and double-click or click the 'magnify' (detail) icon.

## Inspections – View

You can fill in the inspection sheet from the iNET handhelds or you can do the inspections in YardMaster from this screen. You will click the check box indicating that this item was inspected, change the result if there was a problem, and enter a comment describing the problem. Click OK when finished.

## Visit Summary

Once you are on this screen you can see a visit summery for an individual car in one snap shot. This will show you a PLM (plant location message) of the car since it has arrived at the plant. If there are more than one plant visit you can scroll through the visit records and choose the visit you want to see the summary on.

## **ProdAssign - Loading Cars**

(another option)

Another method you can use to load car is using Product Assignment. From any screen that has a ProdAssign button you can click on and go to the load requirements screen to load one car at a time. For the example shown highlight the car in the view plant visits and click on the ProdAssign screen and the load requirements screen will appear.

#### **Order Assignment**

To assign a car to an order in Yardmaster click on the rail scheduler button. The rail rack scheduler screen will open up and ship date is defaulted to show the current and all open orders after that date. You can change what orders to view by using the drop down menu for each data box. Once you highlight the order, information on each order will appear on the bottom of the left panel. If you need to change anything in the order or add any comments you can do so by clicking on the edit order button.

#### **Order Assignment**

Once you have pulled up the orders you want view, double click on the order and a list of available cars for that order/product will appear on the right hand panel if cars do not show up that means the product code on the order doesn't match the current/previous product code for and open visit records. If no cars appear you can choose other criteria by using the drop down menus in the middle column or you can enter the car id. If you highlight a car in the middle panel the car mechanical information, car location and load information will appear on the bottom of the panel. To assign the car click and drag the order to the car you want that order to ship on. Once the car is scheduled to the car the car ID will appear on the left panel for that order. To unassign the car highlight the car and then click and drag back to the order number.

Note: There is a system default that if the status of the car is a system default that if the status of the car is a system default that if the status of the car is a system default that if the status before you assign the order once you drag the order once you

# Scheduling Cars to Rack

To schedule a car to the loading rack click on the rack schedule icon. Select the date, session and track that you want to work with on the right hand column. Then you can type in the car or do a search using the drop down arrows. Highlight the car that you want to work with the drag the car to the spot that you want that car to be loaded at. Once you have saved your changes a switch request in automatically entered for the car.

## Scheduling Cars to Rack

If you need to add rack comments (comments that will print on rack report) click on the rack comments button at the bottom of the right hand panel. The add rack comments screen will open and you can type in your comments in the comments box and click save.

## Rail Rack Schedule Report

To view and print a rack schedule go to Reports...Rail Rack Schedule. There are two reports that you can choose that best meets your business needs.

[] 88 49 (2 美 × 왕 등 6) 49 (2 전 1	Annuelzed Outbounds Yard Inventory Car Status Summary Raicar Movement Summary	, <mark>≠ 4 = 5 = 2 7 8 7 8 9 8 8 = 1 # 8 A = 5 ₩ 5 8 9 0</mark>

## Rack Schedule Report

When the get data box opens enter in your criteria of information you need and then click ok. The report will open, to print click on the printer icon.

## **Direct Switch**

You can move a car from one location to another after the car has physically moved by doing a direct switch. Go to the red and blue arrows and select which yard and track you are moving cars from on the left hand panel and then select where the cars were moved to on the right hand panel. Highlight the car(s) that you want to move and drag them to the panel on the right.

## **Request Switch**

Select which track and spot you would like to switch the selected car to and then click Save. If you want to add switch comments for the rail crew you can do so here on the under the Switch Comments column. These switch request will be what you give the rail crew.

## **Confirming Switch**

To confirm the switch go to Switch...Confirm Switch. The confirm switch screen will pop up blank and you choose the yard and track that you requested the switch to. Once you select the yard/track the cars that were requested to that track will appear and you can then select the car that you need to confirm, highlight and drag the car to the spot/position the car is now on. Once the car is on the correct position in the right hand column click Save.

#### Billing out of Yardmaster

The billing screen will pop up and this is where you create the bill. First highlight the car that you want to ship, then select the origin code and the BOL pattern (your ship to location). After you selected those check the create BOL box and now you can click the generate BOL button at the bottom. After you have generated your bill the BOL status will be in EDI or INC, the EDI status will be in either S for sent or R for ready, if the status is R then you will need to click on the Create EDI button to send the EDI to the railroad.

## **Outbound Reports**

When a railcar is placed in a ship status ('SE' for empties, 'SL' for loads), it will show up on the outbound reports. To view the outbound reports, select Reports...Outbound Reports from the Yardmaster menu.

# Copy List of Cars

The Copy Cars tool is active in the View Pant Visits and allows you to copy a list of cars. First highlight selected cars then select the Copy Icon. The list of cars can then be pasted into a word document, excel or email.

# Copy List of Cars

You can also paste the list of cars into Multi-Car Switch. Go to the Switch drop down on the tool bar. Select Multi-Car Switch. Now select the GetDataBatch icon. Select OK and the Batch Search will retrieve the list of cars that were copied.

# Copy List of Cars

The Paste tool also works in Unit Train Builder. After you copied your list of cars Go to the Loading Ops down on the tool bar. Select Unit Train Builder. Select OK or Cancel. Now select the GetDataBatch icon. Select OK and the Batch Search will retrieve the list of cars that were copied.

# GetDataBatch

The GeDataBatch can be used if you need to copy a list of cars from another source and paste them into the Batch Search. Select the GeDataBatch icon from the tool bar. Then key or right click and paste the car numbers into the Batch Search. Yard Master will retrieve the list of cars if there are visit records for those cars.
