# RAILTRAC® ADVANCE

## RELEASE NOTES

### VERSION 1.4

#### Overview

RAILTRAC® Advance Version 1.4 delivers targeted enhancements and bug fixes to improve system usability, performance, and reporting accuracy.

## Enhancements

### INTERFACE VALIDATIONS

- Interface Validations module has been added to RAILTRAC® Advance. Interface Validations are trip exceptions that are unable to import into the system for various reasons. The interface Validation screen provides the reasons and allows users to manage and correct these exception reasons.

### SHIPMENTS

- Added the ability to add an Origin Code during the Origin Criteria add process

### CLM

- Added the CLM Event column to the default CLMs grid
- In the CLMs grid, made the CLM Event field visible in CLM details

### DIVERSIONS

- Added a common checkbox in the multiple diversions header for updating Fleet Assignment on diverted cars

## Resolutions

### SHIPMENTS

- Fixed an issue preventing users from saving a Destination Alias Bypass from the Shipment Detail ellipsis menu
- Fixed cosmetic issue where updated CLMs didn't appear updated. Visual only — no impact to data or functionality
- Removed the inaccurate error icon from the Commodity Code field
- When the Origin City is updated, a refresh is no longer required to see the appropriate Origin Criteria
- Fixed an issue with adding comment to multiple trips in the Shipments and Jeopardized Shipments menus
- Fixed an issue where multi selected shipments weren't always reflecting the correct Car Status in the detail
- Fixed an issue where updated return cities weren't showing correctly for multiple shipments

# RAILTRAC® ADVANCE

## RELEASE NOTES

### VERSION 1.4

- Moved the Add Comment button to be right justified to match application standards
- Made the Act and Est boxes display the full Act/Est label
- The window now repositions so the details are at the top of the window when Add Shipment is selected
- Removed the incorrect error from the Ship Date field in Shipments
- Fixed an issue that prevented users from filtering the records by Is Diverted and Is Trip Diverted
- Fixed an issue where updating Return Cities on multiple shipments wasn't saving

### ROUTES

- Fixed the ability to add a Participating Railroad from the Route Code detail section
- Fixed an issue that allowed users to update the Return City/State on a Route Code
- Fixed field names in Route Code SPLC fields
- Updates to Auto Close, Route Detail Auto Calc, Intl Border Crossing, and Rule 11 are now saving correctly
- Users are now able to add and save Route Segment Miles in the Routes - Segment Miles grid
- Fixed the Apply Filters button on the Segment Miles grid
- In Route Codes detail, rearranged and added necessary columns in the Route Segments section
- Fixed an issue that was causing the default Route Codes template to be removed from the template chooser after a Route Code was selected
- Moved the Participating Railroad button in Off Route shipments to be right justified to match application standards
- Moved the Save button Routes - Segment Miles detail to be right justified to match application standards

### DIVERSIONS

- Fixed an issue with adding an updated Fleet/BG on the diversion only - now working as expected:

### CLM'S

- Fixed an issue where CLMs were unable to be added unless a record was selected in the grid

### PERFORMANCE & GENERAL FUNCTIONALITY

- Read only field format updated to match application standards.

### REPORTS/TEMPLATES

- Trace at Origin template now displays only current trips by default
- Reformatted dates and times in reports.
- Updated the default grid columns and display fields in several reports.
- Added a Clear CLM Event button in multiple shipments ellipsis menu to the No Bill header in Jeopardized Shipments and in CLMs to mimic current functionality in Advance.

# **RAILTRAC® ADVANCE**

## **RELEASE NOTES**

### **VERSION 1.4**

- Added Route Description, Road, Div Carrier, and OT/OR columns to Get Data Available Columns in Jeopardized Shipments
