## RELEASE NOTES

### VERSION 2.5

#### Overview

AccessControl® Version 2.5 includes new customer-requested features and a range of stability and issue fixes.

## Enhancements

### AC USERS

- Provide an option to Reset Password from the user details page.
- User Details page- Reference 1 and Reference 2 should support both free-text entry and a dropdown list of previously used references (so users can select an earlier-used reference).

### BL IT

- For IT users, when rejecting a request, the system should automatically mark the request as Completed as well.
- Resolved an issue where marking one request as Completed automatically completed other related requests. The system will now only complete the selected request.
- When a DUSER request is submitted, the system now automatically creates related DAPPL and DROLE requests for all assigned applications and roles.

## Resolutions

- Fix for the Reset Password action was missing in the User List for users with the PW RESET role.
- Fix for Unknown roles could not be assigned when adding or editing user roles.
- Resolved an issue where an empty Unknown Application request was being created when removing all Unknown roles.
